Project Name:

Restaurant Management System

Project Details:

The restaurant management system is getting complex day by day and is being used by almost everyone. This system was built to serve the facilities to both internal and external users. By which it means, this can be used by the employee in the restaurant to handle the clients, maintain their orders and will be able to book a table for them. The significant use of this database system is to manage the business, to manage the system and help gain a sustainable line. The external user can look through the menu, browse the prices of the food and lastly can order the meal. This is the best way to maintain the customers' data and take their orders.

Technology Used:

Front-end: HTML, CSS, XAMPP and JavaScript

Back-end: MySQL, PHP, Microsoft Visual Code
